1 INTRODUCTION

This is a Level One Report for the above-mentioned works and presents the results of compaction control and laboratory testing services provided by Pearce Geotech Pty Ltd (PG) during the construction of fill at Matilda Estate Stage 3 & 3A.

PG was engaged by Winslow Constructors to provide Level 1 testing services for the duration of these works in accordance with the project requirements. The work was commissioned by Ryan Louw of Winslow Constructors.

Level 1 testing, as defined in AS3798-2007 "Guidelines on Earthworks for Commercial and Residential Development", provides for full-time inspection of the construction of controlled fill and compaction testing in accordance with AS1289 "Methods of Testing Soils for Engineering Purposes". The Level 1 testing was undertaken by a technician from PG during 11th September 2025 and 12th January 2026.

2 SCOPE OF WORK

2.1 Area of Work

PG provided testing and supervision of fill placed for the dates shown in Appendix A. Conditioning and placement methodology was observed by experienced PG technicians during the period of works. The testing locations were chosen by a PG technician within the relevant work areas of each allotment. Additionally, spot checks for density and moisture were conducted to provide feedback to ground staff during the construction of fill.

This report does not include fill other than where-mentioned in this report or any other fill that may be placed during this period or subsequent periods at or surrounding the subject site. Maintenance and protection of the fill is the obligation of the Contractor and PG takes no responsibility for the state of works outside of the dates shown under appendix A which may be influenced by weather events or continued work on the subject site.

2.2 Placement Specification

The works complete at Matilda Estate Stage 3 & 3A were completed in accordance with MATILDA STAGE 3 WHITTLESEA CITY COUNCIL General Notes Section14 noting a minimum compaction requirement of 95% Standard in accordance with AS3798.2007.

3 CONSTRUCTION PLANT

The following construction plant was used on site as required:

- 1 x D6 Dozer
- 1 x 14t Padfoot Roller
- 1 x Water Cart
- 1 x Excavator
- 1 x 815 Compactor
- Truck and Trailers

4 INSPECTION AND TESTING

4.1 Construction Materials

Gravelly Clay was used as fill for this project.

Fill material was sourced from:

- Imported Material – ACM Quarry

All material was tested for compliance, spread and watered to achieve the specified density and moisture specification.

4.2 Fill Placement

During the initial site inspection, a proof-roll was complete using a fully loaded water cart with a minimum weight exceeding 12t which confirmed a suitable base for placement.

Compaction tests and a proof roll were conducted on each tested layer of compacted fill to ensure compliance with the specification and samples of the fill material were tested in PG's NATA accredited laboratory at 23 Nobility Street Moolap, Vic 3221 (Accreditation Number 18877) to determine the Hilf density ratio and moisture ratio of the material. In total 142 field density tests and 142 moisture contents were conducted.

Control Fill material was placed and spread by a dozer and compactors no more than 250mm/300mm thick and loose, simultaneously water conditioned wherever required and compacted using 815 and 825 compactors. Oversize and any deleterious material was removed by Winslow Constructors if sighted.

4.2.1 Test Summary

Refer to Appendix A.

5 STATEMENT OF COMPLIANCE

PG personnel have provided Level 1 inspection and testing services during construction of the fill Matilda Estate Stage 3 & 3A. A technician from PG was on site on a fulltime basis during fill placement and observed the construction techniques adopted.

Based on these observations made by PG personnel and the results of field and laboratory tests, we consider that the fill has been placed in accordance with the intent of the specification mentioned.

Moisture Variation Note:

Positive values = test is dry of OMC

Negative values = test is wet of OMC
